

# Pit Emptying Using the Gulper

## AFFORDABLE AND CONVENIENT PIT EMPTYING SERVICES- THE GULPER TECHNOLOGY

The gulping machine can be moved  
around areas with narrow roads

## Key facts

- Over 95% of households and institutions depend on onsite sanitation
- More than 80% of latrines are not lined in Uganda
- Most of the growing towns are unplanned, with no access roads
- More than 70% of Faecal sludge emptied end up in unknown destinations such as rivers

*The faeces is then safely disposed of at the DEFAST plant in Ayer*

## What the gulper technology brings

- Cost effective, using the “clean a little, pay a little” strategy allows you to use your latrine with minimal emptying cost, saving you the cost of constructing a new pit
- Can go in narrow settlements
- Ability to empty all kinds of pits and remove rags that may be present in the pit
- Safe disposal of sludge protects the environment
- Ready to use after emptying; no demolition, clean and fresh

## Other services

- Latrine construction and upgrade
- Consultancy in sanitation services
- Research and Trainings
